ABOUT

The Seabull 220

LOCATION

Antalya, Antalya, Turkey

• Built with similar structural principles and materials as the modern Boeing and Airbus aircraft.

• From the masters of complex marine construction, who created the landmark carbon enforced composite motor yachts for the last 30 years, we present a new design that will also be the pinnacle of mid-size Mega Yachts for the next generation, as were the previous designs.

• By blending aircraft grade aluminum with carbon enforced epoxy composites structures we will achieve as with our previous yachts, the ultimate of structural minimum weight, maximum durability and excellent fatigue resistance, allowing better stability than any other yacht of this kind and size built with traditional materials and methods.

• All of the previous models have been built as ‘semi-custom’ projects of 4-6 models only to keep them relatively unique while paying attention to finish details and owners various changes and options requirements but yet following the well repeated and tested building methods.

• The interiors are also built by the most experienced furniture makers with over 30 years of marine experience that have furnished not only our own yachts but also some of the most renown yachts built by the best European yards.

Full specifications
